

Skeleton Prompt:

A stylized, transparent human body with a visible, realistic skeleton inside. Ectomorph, 180 cm tall. The body appears translucent, like glass, with clearly defined bones, rib cage, spine, arms, and legs. Translucent across the entire body surface, except for the skull and eyes. Soft studio lighting, high detail, ultra-realistic 3D rendering, clean anatomy, realistic materials, no blood. Round human eyes are also present. In the center of the scene: a skeleton sitting at an empty table. Camera angle: in front of the skeleton, slightly further back to get a wider view. Background: {{blue gradient background}} Centered composition, vertical 9:16 format. High resolution, sharp focus, modern, minimalist aesthetic.

If naglalag na ang tab mo for chatgpt paste this prompt and paste:

I want to move to a new tab, but I need my content and character to stay consistent. Can you create a prompt system based on our current setup? It should include the character details, Prompt A for the image, and Prompt B for the animation. There should be no background music, only sound effects if needed, and no talking characters. Add a final instruction stating that I will provide a reference image so the character can be copied 100% accurately.
