

SKELETON PROMPT !

A stylized, transparent human body with a visible, realistic skeleton inside. Ectomorph, 180 cm tall. The body appears translucent, like glass, with clearly defined bones, rib cage, spine, arms, and legs. Translucent across the entire body surface, except for the skull and eyes. Soft studio lighting, high detail, ultra-realistic 3D rendering, clean anatomy, realistic materials, no blood. Round human eyes are also present. In the center of the scene: a skeleton sitting at an empty table. Camera angle: in front of the skeleton, slightly further back to get a wider view. Background: {{blue gradient background}} Centered composition, vertical 9:16 format. High resolution, sharp focus, modern, minimalist aesthetic.

After the AI generates an image, go to a new tab and paste your image. Then, upload the PDF file named "Skeleton Workflow."

After you already have the branded skeleton character image, go to a new tab, paste your image, and paste this prompt:

PROMPT A — IMAGE GENERATION SYSTEM

Create a cinematic ultra-detailed Pixar/Disney-inspired realistic animated scene using the locked character design.

Requirements:

- Keep the character identical in every image
- Use cinematic lighting
- Use realistic environmental depth
- Add emotional storytelling through body language
- Highly detailed textures
- Realistic reflections and shadows

- Shallow depth of field
- Professional animated movie composition
- 9:16 vertical composition
- Ultra realistic rendering
- No text on screen
- No subtitles
- No watermark
- No extra characters unless requested

Camera shot variations allowed:

- Full body shot
- Side profile shot
- Close-up shot
- Overhead shot
- Behind-the-back shot
- Cinematic tracking angle
- Low angle shot
- Eye-level emotional shot

Environment rules:

- Realistic cinematic environments
- Dynamic lighting
- Volumetric light rays if needed
- Realistic floor reflections
- Highly detailed props
- Consistent color palette and atmosphere

Emotion rules:

- Emotional expressions must feel natural

- Eyes should remain expressive
- Body posture should match the situation
- Keep cinematic storytelling style

PROMPT B — ANIMATION SYSTEM

Animate the exact same locked character from the reference image.

Animation rules:

- Maintain identical facial features and body proportions
- Maintain exact hairstyle and clothing
- Smooth cinematic character motion
- Natural hand movement
- Realistic blinking
- Natural breathing movement
- Realistic cloth physics
- Realistic hair movement
- Realistic water splash physics if water is present
- Cinematic camera movement
- Professional animated movie quality
- 9:16 vertical format
- Ultra detailed rendering
- Keep animation smooth and realistic

Audio rules:

- No background music
- No voice acting
- No talking characters
- Only natural sound effects if needed

Examples:

- Water splashes
- Footsteps
- Cloth movement
- Kitchen ambience
- Wind
- Object movement
- Keep audio cinematic and realistic

Camera movement examples:

- Slow push-in
- Cinematic pan
- Handheld emotional movement
- Slow orbit shot
- Tracking shot
- Focus pull transitions

Animation quality:

- Pixar-level cinematic realism
- Emotional storytelling
- Realistic environmental interaction
- High detail facial animation
- Film-quality lighting
- Realistic depth of field

FINAL INSTRUCTION

I will provide a reference image before generation.

The AI must copy the character 100% accurately based on the reference image, including:

- Face structure

- Hairstyle
- Clothing
- Eye shape
- Body proportions
- Skin tone
- Overall cinematic style

The character must remain fully consistent across all images and animations.
